Looking for a challenging, varied career?

Become a process technician.

As a process technician, you'll control, monitor and troubleshoot equipment. Your strong oral and written communication skills will enable you to work effectively in a team environment and update oncoming crews at shift changes, maintain data logs, prepare reports and other materials. You'll apply your knowledge of math and science to use the latest computer systems to control multi-billion dollar plants.

Advance Society

Process technicians operate manufacturing facilities with technology that enables them to control and enhance the quality of their product.

Anticipate Adventure

The job of a process technician can be in the largest refinery in Minnesota or in the high plains of West Texas, in a refinery in Ohio or an electric generation unit in Mississippi.

Live Your Passion

On a platform in the Gulf of Mexico, as well as on the gulf coast, the typical operator only works 26 weeks/year. Starting pay can be \$25+ an hour and top out pay can be \$36+ an hour. That is \$50,000-\$75,000 per year!

Capture Your Dream

Get what you want in life with a two-year associate of applied science degree and work in a diverse, drug-free, and safe environment.
